Re: HHS 5 Year Plan Data Collation

O Sii'em nu Si'yeyu

Research informs decision making for our BOD, including our programs, policies, and future funding. In December 2024, our BOD started discussing and planning for the new 5 Year Health plan. December 2025 is just over 4 weeks away, and with your valuable support, we continue to move forward.

Recently, Huli'tun Health Society's contracted Consultant is collating and analyzing the HHS 5 Year Long Health Surveys received from all age brackets. Through the early data analysis, one of the statistics that we can immediately share with you is that it is evident that approximately 69% of respondents hear and learn about HHS programs and services through *social media*!

This affirms the importance of the various types of communication received by HHS. Furthermore, the data also shows *door-to-door*, and *in-person* communication is equally valuable, as well as word of mouth. Your data provides us with an early picture that our Snuw'uy'ulh protocols are integral in our communication protocols. The early evidence creates an opportunity for a deeper understanding of the communication tools used today.

The new 5 Year Health Plan is intended to be a living document that shapes and guides HHS's programs and services! HHS plans to continue with our Survey Data communication updates.

I humbly raise my hands to our respected Members for participating in the HHS Long Survey!

Huy tseep q'u Sii'em nu Si'yeyu.
Thulamiye, Maureen Wilson, Health Director
